Innovation from Cell to Society

Fast Facts... AllerGen Partnerships

The AllerGen Network acts as:

- A nexus for coordination, interaction and cross-sector linkages.
- A mechanism for identifying and funding multi-disciplinary research to advance Canada's capacity in the field of allergic and immune disease.
- A national catalyst to expand clinical expertise of professionals and trainees in allergic and related immune diseases, helping meet the needs of the public and private sectors in creating research-based products and services.

New linkages with national and international academic, private and public sector organizations will:

- Aid in development and mobilization of knowledge in the treatment and prevention of allergic and related immune diseases.
- Ensure AllerGen research does not duplicate research being done elsewhere.

Number of Partners: 158
